

L^AT_EX Class huawei*

Yegor Bugayenko
yegor256@gmail.com

2024-12-17, 0.19.1

1 Introduction

The provided class huawei helps you design your work documents and presentations keeping the code short and the style elegant enough both for management and technical papers. To use the class you simply mention its name in the preamble:

```
1 \documentclass{huawei}
2 \begin{document}
3 Hello, world!
4 \end{document}
```

We recommend you to use `latexmk` to compile your `.tex` files to `.pdf`. The simplest setup will require a few files staying next to your `.tex` file, in the same directory (“story” is the name of your project here):

```
story\
  .latexmkrc
  .gitignore
  story.tex
```

The content of your `.latexmkrc` file would be this:

```
$pdflatex = 'pdflatex %0 --shell-escape %S';
```

Make sure the `.gitignore` file lists all the files generated by `pdflatex` during the compilation. You don’t need to commit them to your repository, since they are temporary and will be generated again when you compile your document. In order to compile the document, just say `latexmk` on the command line.

*The sources are in GitHub at [yegor256/huawei.cls](https://github.com/yegor256/huawei.cls)

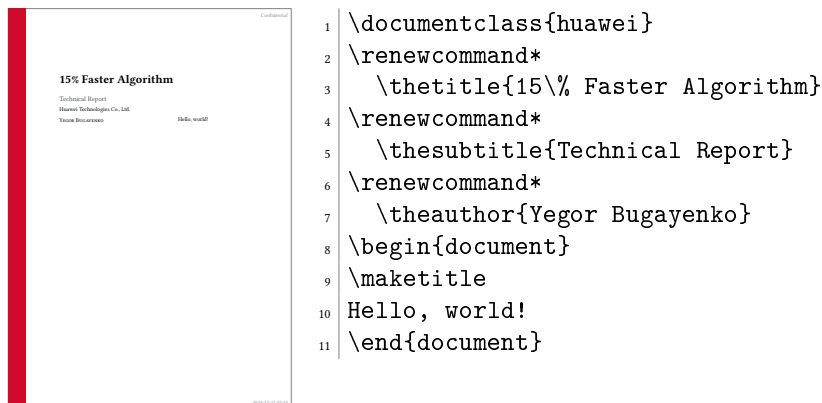

2 Class Options

There are a few class options, provided in square brackets after the `\documentclass`, which can help you fine-tune the layout of your document:

<code>landscape</code>	The option <code>landscape</code> makes the document in landscape format, also changing the size of the paper to 16x9 inches (the default page size is A4), making it perfect for presentations.
<code>dark</code>	The option <code>dark</code> turns on a dark layout, where the page color is black and the text is white.
<code>slides</code>	The option <code>slides</code> makes all headers a bit larger, assuming that the document is in the landscape mode and being presented as a slide deck.
<code>nocover</code>	The option <code>nocover</code> , if it's present, avoids printing the cover images on the first page by the <code>\PrintTitlePage</code> command.
<code>anonymous</code>	The <code>anonymous</code> removes the name of the author everywhere, including the bottom of the page, where the author's name stays next to the name of the company.
<code>nobrand</code>	The option <code>nobrand</code> avoids mentioning the brand of Huawei anywhere in the document and removes the logo too.
<code>nosecurity</code>	The option <code>nosecurity</code> avoids mentioning the level of security at the right top corner of the document and also avoids showing the ID of the author where it usually is visible.
<code>nodate</code>	The option <code>nodate</code> doesn't show the date and time at the bottom of each page, where they usually are rendered in ISO 8601 format.
<code>nopaging</code>	The option <code>nopaging</code> avoids page numbers at the bottom of each page.
<code>authordraft</code>	The option <code>authordraft</code> prints a big "It's a draft" message across each page.
<code>breaks</code>	The option <code>breaks</code> forces all <code>\section</code> to start from a new page.

3 Preamble

In the preamble you can specify meta information about the document, such as its title or author's name, here is how:

It's recommended to use `\renewcommand*` instead of `\renewcommand` in order to let \LaTeX catch you if by mistake a new line gets into the content.

The following meta commands are defined:

<code>\thetitle</code>	<code>\thetitle</code> is the main title of the document to be used in the text and in the properties of the PDF document.
<code>\thesubtitle</code>	<code>\thesubtitle</code> is the subtitle to be printed under the title.

`\theauthor` `\theauthor` is the author of the document in “first-name last-name” format.
`\theid` `\theid` is the internal ID of the author, if it’s applicable.
`\thesecurity` It is the level of security of the document, which is usually printed at the top right corner of it; usual values are “Internal,” “Confidential,” or “Secret.”
Default values of all these commands are empty. If you don’t renew them in your document, nothing will be printed.

4 Custom Commands

Inside the document body you can use these commands:

`\PrintFirstPage` It is recommended to use `\PrintFirstPage` for rendering the first page in landscape document, for example a project charter. The only argument of the command is the name of an image to render at the right bottom corner. You can omit the name and just call the command with an empty argument. In this case the default image will be rendered, a pretty good looking one:

```
1 \documentclass[landscape]{huawei}
2 \renewcommand*
3   \thetitle{Perpetum Mobile}
4 \renewcommand*
5   \theauthor{Yegor Bugayenko}
6 \begin{document}
7 \PrintFirstPage{}
8 \end{document}
```

`\PrintLastPage` `\PrintLastPage` prints the last page of a project charter or a similar landscape document:

```
1 \documentclass[landscape]{huawei}
2 \begin{document}
3 \PrintLastPage{}
4 \end{document}
```

`\PrintThankYouPage` `\PrintThankYouPage` prints the last page with a "Thank You" message in the center.

```
1 \documentclass[landscape,dark]{huawei}
2 \begin{document}
3 \PrintThankYouPage{}
4 \end{document}
```

`\PrintDisclaimer` `\PrintDisclaimer` prints a paragraph at the bottom of the page with a standard disclaimer:

```
1 \documentclass{huawei}
2 \begin{document}
3 \section{Introduction}
4 Hello, world!
5 \subsection{More Details}
6 Hello again!
7 \PrintDisclaimer
8 \end{document}
```

5 Best Practices

You are free to design your documents any way you want. However, it would be convenient for yourself and for your readers, if you follow the convention we have for business and technical documents.

The rule of thumb is simple: try *not* to format your documents. Instead, let the class designed by us do this work for you. Just type the content without changing the layout, adding colors, changing fonts, etc. The less you modify the look-and-feel, the better your documents will be perceived by your readers.

5.1 Two Columns

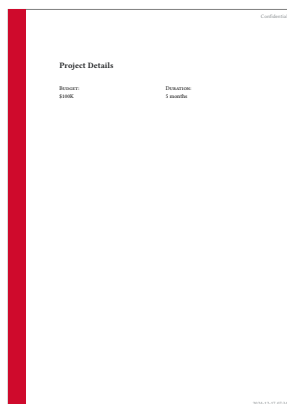

In the landscape format it's recommended to use two columns, for better readability of the text. Here is how:

```
1 \documentclass[landscape]{huawei}
2 \begin{document}
3 \newpage
4 \begin{multicols}{2}
5 \section*{First}
6 Here goes the first column content.
7 \columnbreak
8 \section*{Second}
9 Here goes the second column content.
10 \end{multicols}
11 \end{document}
```

5.2 Crumbs

When you need to put many small information pieces into one page, we recommend you to use “crumbs”:

```

1 \documentclass{huawei}
2 \begin{document}
3 \newpage
4 \section*{Project Details}
5 \begin{multicols}{2}
6 \raggedright
7 \PrintCrumb{Budget}{\$100K}
8 \PrintCrumb{Duration}{5 months}
9 \end{multicols}
10 \end{document}

```

6 Implementation

First, we load the parent class:

```
1 \LoadClass[12pt]{article}
```

Then, we parse class options:

```

2 \RequirePackage{pgfopts}
3 \pgfkeys{
4   /huawei/.cd,
5   boring/.store in=\huawei@boring,
6   breaks/.store in=\huawei@breaks,
7   slides/.store in=\huawei@slides,
8   nosecurity/.store in=\huawei@nosecurity,
9   authordraft/.store in=\huawei@authordraft,
10  nobrand/.store in=\huawei@nobrand,
11  nodate/.store in=\huawei@nodate,
12  nocover/.store in=\huawei@nocover,
13  nopaging/.store in=\huawei@nopaging,
14  landscape/.store in=\huawei@landscape,
15  anonymous/.store in=\huawei@anonymous,
16 }
17 \ProcessPgfPackageOptions{/huawei}

```

Then, we set Helvetica as the default font for the entire document, if the boring document option is used:

```

18 \ifdefined\huawei@boring
19   \usepackage[scaled]{helvet}
20   \renewcommand\familydefault{\sfdefault}
21 \fi

```

Then, we redefine `\section` command in order to break pages for each section, with the help of `titlesec` package:

```

22 \RequirePackage{titlesec}
23 \ifdefined\huawei@boring
24   \def\huawei@sectioncolor{red}
25 \else
26   \def\huawei@sectioncolor{black}
27 \fi
28 \makeatletter

```

```

29 \titleformat
30 {\section}
31 {\color{\huawei@sectioncolor}\ifdefined\huawei@breaks\clearpage\fi\normalfont\Large\bfseries}
32 {\color{\huawei@sectioncolor}\thesection}{1em}{}}
33 \makeatother

    Then, we set the size of the page:
34 \RequirePackage{geometry}
35 \makeatletter\ifdefined\huawei@landscape
36 \ifdefined\huawei@boring
37 \geometry{paperwidth=16in, paperheight=9in,
38 left=3in, right=2.5in, top=1in, bottom=1.8in}
39 \else
40 \geometry{paperwidth=16in, paperheight=9in,
41 left=4in, right=2in, top=1.5in, bottom=1.5in}
42 \fi
43 \else
44 \geometry{a4paper, left=1.5in, right=1in,
45 top=1.2in, bottom=1.2in}
46 \fi\makeatother

    Then, we set the size of the font:
47 \makeatletter\ifdefined\huawei@slides
48 \usepackage[fontsize=24pt]{fontsize}
49 \fi\makeatother

    Then, we configure the encodings:
50 \RequirePackage[T1]{fontenc}
51 \RequirePackage[utf8]{inputenc}

    Then, we include a few important packages:
52 \RequirePackage{tabularx}
53 \RequirePackage{anyfontsize}
54 \RequirePackage{multicol}
55 \RequirePackage{ragged2e}
56 \RequirePackage{multicol}
57 \RequirePackage{paralist}
58 \RequirePackage{makecell}
59 \RequirePackage{graphicx}
60 \RequirePackage{array}
61 \RequirePackage[abspath]{currfile}
62 \RequirePackage{wrapfig}
63 \RequirePackage{tikz}
64 \RequirePackage{tabularx}
65 \RequirePackage{titling}
66 \RequirePackage{svg}

    Then, we include lastpage package to enable total counting of pages:
67 \RequirePackage{lastpage}

    Then, we configure libertine font:
68 \PassOptionsToPackage{tt=false,type1=true}{libertine}
69 \RequirePackage{libertine}

    Then, we configure microtype:
70 \RequirePackage{microtype}
71 \AddToHook{env/verbatim/begin}{\microtypesetup{protrusion=false}}

```

Then, we configure footmisc:

```
72 \PassOptionsToPackage{para}{footmisc}
73 \RequirePackage{footmisc}
74 \setlength{\footnotemargin}{2pt}
75 \setlength{\footnotesep}{2pt}
```

Then, we configure enumitem:

```
76 \RequirePackage[inline]{enumitem}
77 \setlist{nosep}
```

Then, we configure textpos:

```
78 \RequirePackage[absolute]{textpos}
79 \TPGrid{16}{16}
```

Then, we configure datetime:

```
80 \PassOptionsToPackage{mmdyyyy, iso}{datetime}
81 \RequirePackage{datetime}
82 \newtimeformat{daytime}{\twodigit{\THEHOUR}:\twodigit{\THEMINUTE}}
```

Then, to enable `\pageref*` command, we configure hyperref:

```
83 \PassOptionsToPackage{hidelinks}{hyperref}
84 \RequirePackage{hyperref}
```

Then, we configure biblatex:

```
85 \RequirePackage[maxnames=1,minnames=1,natbib=true,
86   citestyle=numeric,bibstyle=numeric,
87   url=false,isbn=false,isbn=false]{biblatex}
```

Then, we make figure captions smaller and in `sf` font:

```
88 \PassOptionsToPackage{font={small,sf}}{caption}
89 \RequirePackage{caption}
```

Then, we make all figures and tables bordered by default, with the help of the `float` package:

```
90 \RequirePackage{float}
91 \floatstyle{boxed}
92 \restylefloat{table}
93 \restylefloat{figure}
```

Then, we make sure all figures and tables are centered by default, as recommended [here](#):

```
94 \makeatletter
95 \g@addto@macro{\floatboxreset}{centering}
96 \makeatother
```

Then, we set spacing between lines:

```
97 \RequirePackage{setspace}
98 \setstretch{1.08}
```

Then, we define branded colors:

```
99 \PassOptionsToPackage{table}{xcolor}
100 \RequirePackage{xcolor}
101 \makeatletter
102 \ifdefined\huawei@boring
103   \definecolor{red}{HTML}{8C1A11}
104   \definecolor{black}{HTML}{000000}
105   \definecolor{gray}{HTML}{878C8F}
```

```

106 \definecolor{lightgray}{HTML}{DCDDDF}
107 \definecolor{yellow}{HTML}{F6C342}
108 \definecolor{blue}{HTML}{2B62BA}
109 \definecolor{green}{HTML}{499167}
110 \definecolor{orange}{HTML}{F7CEA1}
111 \else
112 \definecolor{red}{HTML}{CF0A2C}
113 \definecolor{black}{HTML}{232527}
114 \definecolor{gray}{HTML}{878C8F}
115 \definecolor{lightgray}{HTML}{DCDDDF}
116 \definecolor{yellow}{HTML}{F2DC5D}
117 \definecolor{blue}{HTML}{2274A5}
118 \definecolor{green}{HTML}{499167}
119 \definecolor{orange}{HTML}{F06543}
120 \fi
121 \makeatother

```

\huawei@header Then, we define \huawei@header:

```

122 \makeatletter\newcommand\huawei@header[1]{%
123 \ifdefined\huawei@slides%
124 \setstretch{0.8}%
125 \fontsize{19pt}{24pt}\selectfont%
126 \else%
127 \setstretch{0.8}%
128 \fontsize{11pt}{13pt}\selectfont%
129 \fi%
130 \sffamily\color{gray}#1\par%
131 }}\makeatother

```

\huawei@bar Then, we define \huawei@bar:

```

132 \makeatletter\newcommand\huawei@bar{%
133 \ifdefined\huawei@boring%
134 \begin{textblock}{16}[0,1](0,16)%
135 \tikz \node[fill=lightgray,minimum width=16\TPHorizModule,
136 minimum height=1.5\TPVertModule] {};%
137 \end{textblock}%
138 \begin{textblock}{8}[1,0.5](15,15.25)%
139 \raggedleft\huawei@logo{1.4}
140 \end{textblock}%
141 \ifdefined\huawei@nobrand\else%
142 \begin{textblock}{8}[0,0.5](1,15.25)%
143 \fontsize{16}{16}\selectfont%
144 \textcolor{gray}{\thecompany{}}%
145 \end{textblock}%
146 \fi%
147 \ifdefined\huawei@nosecurity\else%
148 \begin{textblock}{8}[0.5,0.5](7,15.25)%
149 \fontsize{16}{16}\selectfont%
150 \centering\textcolor{gray}{\thesecurity}%
151 \end{textblock}%
152 \fi%
153 \ifdefined\huawei@nopaging\else%
154 \begin{textblock}{8}[1,0.5](12,15.25)%
155 \raggedleft\fontsize{16}{16}\selectfont%

```

```

156     \textcolor{gray}{Page \#\thepage{} of \pageref*{LastPage}}%
157     \end{textblock}%
158     \fi%
159     \begin{textblock}{2}[1,0.5](14,15.25)%
160     \tikz \path[scale=0.3, draw=none, rotate=40, fill=white] (0,0) .. controls (3,1) .. (16
161     \end{textblock}%
162     \else%
163     \begin{textblock}{1}[0,0](0,0)%
164     \tikz \node[fill=red,minimum width=\TPHorizModule,
165     minimum height=16\TPVertModule] {};%
166     \end{textblock}%
167     \fi%
168 }\makeatother

```

\huawei@logo Then, we define \huawei@logo:

```

169 \makeatletter\newcommand\huawei@logo[1]{
170 \def\BLACK{\ifdefined\huawei@dark white\else black\fi}
171 \def\BLANK{\ifdefined\huawei@dark black\else white\fi}
172 \definecolor{logo-red}{HTML}{CF0A2C}
173 \begin{tikzpicture}[y=0.80pt, x=0.80pt, yscale=-#1,
174 xscale=#1, inner sep=0pt, outer sep=0pt]
175 \begin{scope}[even odd rule,line width=0.800pt]
176 \begin{scope}[shift={(0,-0.00024)}]
177 \path[fill=\BLACK] (10.9375,30.2240) -- (10.9375,33.6097)
178 .. controls (10.9375,34.5713) and (10.4603,35.0845) ..
179 (9.5932,35.0845) .. controls (8.7212,35.0845) and
180 (8.2411,34.5565)
181 .. (8.2411,33.5686) -- (8.2411,30.2278) -- (7.0415,30.2278)
182 -- (7.0415,33.6097) .. controls (7.0415,35.2737) and
183 (7.9658,36.2272) .. (9.5774,36.2272) .. controls
184 (11.2041,36.2272) and (12.1371,35.2554) .. (12.1371,33.5609) --
185 (12.1371,30.2240)
186 -- (10.9375,30.2240) -- cycle;
187 \path[fill=\BLACK] (15.3511,30.2240) -- (12.7456,36.1351) --
188 (13.9702,36.1351) -- (14.4731,34.9903) -- (14.5091,34.9045) --
189 (17.2158,34.9045) -- (17.7467,36.1351) -- (19.0045,36.1351) --

545 \else
546 \printbibliography%
547 \fi%
548 \fi%
549 }\makeatother

```

Then, we set the background color of the document, if required by the dark class option:

```

550 \makeatletter\ifdefined\huawei@dark%
551 \RequirePackage{pagecolor}%
552 \pagecolor{black}%
553 \color{white}%
554 \fi

```

Then, we configure the layout:

```

555 \AtBeginDocument{%
556 \raggedbottom%
557 \raggedcolumns%
558 \setlength\headheight{32pt}%
559 \setlength\footskip{32pt}%
560 \setlength\topskip{0mm}%
561 \setlength\parindent{0pt}%
562 \setlength\parskip{6pt}%

```

```
563 \setlength\columnsep{32pt}%
564 \renewcommand{\arraystretch}{1}%
565 }
```

Then, we renew a few commands:

```
566 \renewcommand\title[1]{\renewcommand\thetitle{#1}}
567 \newcommand\thetitle{\textbackslash{}thetitle}
568 \newcommand*\thecompany{Huawei Technologies Co., Ltd.}
569 \newcommand\thesubtitle{}
570 \renewcommand\author[1]{\renewcommand\theauthor{#1}}
571 \newcommand\theauthor{\textbackslash{}theauthor}
572 \newcommand*\thesecurity{Confidential}
573 \newcommand*\theid{}
574 \ifcsname nospell\endcsname\else\newcommand\nospell[1]{#1}\fi
```

Change History

v0.1.0	General: The first draft version.	5	Smaller and sans-serif font for captions of figures.	7	
v0.10.0	General: Some colors redefined.	5	v0.18.0	General: Now we use <code>pfgopts</code> for parsing class options.	5
v0.11.0	General: The fixed-width font is rendered correctly now, without <code>ffcode</code>	5	<code>\PrintBibliography</code> : The bibliography prints in one column unless <code>breaks</code> class option is specified.	16	
v0.12.0	General: The <code>abstract</code> is now formatted correctly.	5	v0.19.0	General: New option <code>borring</code> added, making the layout of the document more compliant with the expectations of Huawei.	5
v0.14.0	General: The <code>l3build</code> is now used for build automation, instead of <code>Makefile</code>	5	v0.3.0	General: The cover picture added for front pages.	5
v0.15.0	General: A new package option <code>breaks</code> introduced, which forces all sections to start from a new page.	5	v0.4.0	General: The current time is rendered without seconds.	5
v0.16.0	General: The <code>doi</code> tag enabled for <code>biblatex</code>	7	v0.5.0	General: The <code>DEPENDS.txt</code> file added.	5
v0.17.0	General: All figures and tables are bordered by default.	7	v0.6.0	General: The <code>ffcode</code> and <code>href-ul</code> packages created an their code removed from this class.	5
	All figures and tables are centered by default.	7	v0.7.0	General: The <code>authordraft</code> option is now supported.	5

Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in *roman* refer to the code lines where the entry is used.
